

The Star-Ledger/Eagleton-Rutgers Poll

EMBARGOED – NOT FOR RELEASE UNTIL: SUNDAY, AUGUST 13, 1995

RELEASE: SL/EP 53-4 (EP 103-4)

CONTACT: JANICE BALLOU (908)828-2210, Ext. 240

RELEASE INFORMATION

A story based on the survey findings presented in this release and background memo will appear in Sunday's *Star-Ledger*. We ask users to properly attribute this copyrighted information to "*The Star-Ledger/Eagleton Poll*."

QUALITY OF LIFE IN NEW JERSEY

MOBILITY AND SOCIABILITY

While there is pessimism about the overall quality of life in New Jersey, most residents plan to stay in the state.

Overall, 7-in-10 residents feel there is increasing anger about the quality of life in New Jersey. However, half say New Jersey residents rate their quality of life the same as people in other states. In the past decade there has been a 12 percentage point decline in the percentage who say the state has become a better place to live.

Closer to home New Jerseyans are more optimistic. Seven-in-ten state residents give positive ratings to their own towns and neighborhoods. In addition, concern about neighborhood crime is at its lowest since 1977 when half of the state's residents reported it was a serious problem. Currently 4-in-10 feel crime is a serious problem in their neighborhood which is an 11 percentage point decline from 1994.

Even though overall feelings about life in the state are generally negative, 3-in-4 New Jerseyans plan to stay in the state compared to 1-in-4 who would leave.

Current New Jerseyans who have relocated didn't move far from home. While 8-in-10 New Jerseyans are new residents in their current communities, 7-in-10 of those who relocated

- more -

came from somewhere else in New Jersey. Among those who have moved, 1-in-4 went from an urban area in New Jersey to a suburban location.

Socially, 4-in-10 say New Jerseyans are losing their ability to get along with each other, but half say this isn't any better or worse than what is happening in other states. When it comes to getting respect from others, New Jerseyans say they get the most respect from neighbors and colleagues at work, while they get the least respect from other drivers on the highway.

"While New Jerseyans are more than willing to be critical about the quality of life in their state, they are generally content with their own communities," commented Janice Ballou, Director of the Poll. "Given a choice, the majority of New Jerseyans pick their own neighborhoods as the place where they want to live."

The *Star-Ledger*/Eagleton Poll was conducted with 802 randomly selected New Jersey adults by telephone from May 25 to June 1, 1995.

QUALITY OF LIFE IN NEW JERSEY

New Jersey residents are growing increasingly angry about the quality of their lives and feel they have not seen an improvement in the state over the past few years. While one-quarter say New Jersey has become a better place to live in the past five or ten years (26%), over one-third feel that it has become worse (35%), another third feel that there hasn't been any change (35%), and 5 percent don't know. The percentage saying that New Jersey has improved as a place to live has declined by 12 percentage points over the past decade. In 1984, more state residents felt that New Jersey had become better (38%) than either said it had become worse (30%) or had stayed the same (25%) as a place to live.

- more -

In addition, there is growing dissatisfaction among New Jersey residents with the quality of their lives. More than seven-in-ten people agree strongly (41%) or mildly (31%) that New Jerseyans are becoming increasingly angry about the quality of their lives. Less than 1-in-4 disagree either mildly (16%) or strongly (7%), and 5 percent don't know.

However, New Jerseyans do not think that the grass is greener in other states. While 1-in-5 say that state residents consider the quality of their lives as better than people in the rest of the country (19%) and 1-in-4 think that New Jerseyans have it worse (26%), almost half (48%) feel that New Jersey residents think the quality of their lives is the same as people in the rest of the country.

QUALITY OF LIFE IN THE TOWNS

New Jerseyans continue to give their own towns positive ratings. Seven-in-ten residents report that their hometown is an excellent (30%) or good place to live (40%), while three-in-ten rate their town as only fair (21%) or poor (9%). Similarly, seven-in-ten rate their neighborhood as an excellent (38%) or good (32%) place to live, while 22 percent say it is only fair and 7 percent rate it as poor.

Eight-in-ten suburban (81%) and rural (81%) residents give their town positive ratings compared to 55 percent of urban residents and 40 percent of those living in New Jersey's major cities who rate their towns positively.

In the past year there has been an 11 percentage point decline in the perceptions of the seriousness of crime in one's neighborhood. Currently, about four-in-ten New Jersey residents feel that crime is a very (8%) or somewhat (30%) serious problem in their neighborhood, while six-in-ten feel that it is not a serious problem (61%). In 1994, about half of the state's residents felt that

- more -

crime in their neighborhood was a very (11%) or somewhat (38%) serious problem. The percentage of New Jerseyans who feel that crime in their neighborhood is serious (38%) is at its lowest since 1977 when Eagleton began asking about neighborhood crime.

Regionally, rural residents (85%) are most likely to say that crime is not at all serious where they live, followed by suburban residents (70%). Less than half of urban New Jersey residents (47%)

feel that crime is not at all serious in their neighborhood, and 18 percent of those living in New Jersey's major cities say the same.

Compared to past surveys, New Jerseyans are also less likely to feel that crime in their neighborhood has increased. Nineteen percent say crime has gone up in the past year, 7 percent say it has gone down, 67 percent say it has remained the same, and 6 percent don't know. This is a 6 percentage point decline from 1994, when 25 percent of the state felt that neighborhood crime had risen over the previous year, and a 9 percentage point drop from 28 percent in 1993. City residents (35%) and those who live in other urban areas (24%) are more likely than residents of suburban (17%) or rural areas (7%) to say that crime has gone up in their neighborhoods.

SOCIABILITY

New Jersey residents are divided on whether or not people are losing their ability to get along with each other. While 44 percent agree strongly (20%) or mildly (24%) that New Jersey residents are losing the ability to get along, 51 percent disagree strongly (25%) or mildly (26%), and 5 percent don't have an opinion. Men (52%) are more likely than women (37%) to agree that New Jerseyans are not able to get along. Also, residents of the major New Jersey cities are most likely to agree with this statement (63%) while state residents aged 65 or older are least likely to agree (23%).

- more -

However, most New Jerseyans do not think that people elsewhere get along any better. Twelve percent think that New Jerseyans get along with each other better than other Americans do, and 26 percent say people in the rest of the country get along better. However, more than half (55%) say that other Americans get along with each other about the same as New Jerseyans do.

Overall, most New Jersey residents feel that they get at least some respect in their interaction with other people, but the degree of respect differs in each of five situations:

➤ **From Your Neighbors (91%)**

Nine-in-ten residents feel they get a great deal (59%) or some (32%) respect from their neighbors.

Only 7 percent say that they don't get much (5%) or no respect at all (2%). More suburban residents say they get a great deal of respect from their neighbors (66%) when compared to those who live in rural communities (55%), major cities (52%) or other urban areas (51%).

➤ **The People That You Work With (80%)**

Eight-in-ten say they get a great deal (50%) or some (30%) respect from co-workers, while only 3 percent get not much (2%) or none (1%). Sixteen percent have no opinion on this.

➤ **People Who Wait on You in Stores (84%)**

While more than eight-in-ten people say they get at least some respect from people who wait on them, 27 percent say they get a great deal of respect while 57 percent say they get some respect in this situation. Fifteen percent say they don't get much (11%) or any (4%) respect from store personnel.

➤ **From Other People When You're Standing in Line (77%)**

More than three-in-four people feel they get a great deal (20%) or some (57%) respect from others while waiting in line, compared to 1-in-5 people who say they get not much (15%) or no respect (7%).

➤ **Other Drivers on the Highways (48%)**

While almost half of New Jerseyans say that they get at least some respect from other drivers, only 5 percent feel it is a great deal of respect, while 43 percent say it is some respect. In comparison, 48 percent say they get not much (24%) or no respect (24%) from other drivers.

- more -

IN-STATE MOBILITY

About 1-in-5 (19%) New Jerseyans have lived in the same town all their lives. Among those who have moved to where they live now, 70 percent last lived in another New Jersey town, while 10 percent moved from New York City, 7 percent from Philadelphia, 8 percent from elsewhere in the United States, and another 5 percent immigrated to New Jersey from another country.

Lifetime community residents tend to be represented more in New Jersey's major cities, with 31 percent of city dwellers saying they have lived there all their lives. By comparison, 19 percent of other urban residents say the same, along with 17 percent of suburbanites, and 18 percent of rural residents.

Although eight-in-ten New Jerseyans moved into their current towns, most have not come far. Two-in-five people moved from another town in the same New Jersey county and 19 percent from a bordering county. Another 11 percent came from elsewhere in New Jersey, and 9 percent moved from New York City or Philadelphia to a bordering New Jersey county. Another 21 percent moved to the state from more distant places outside of New Jersey. South Jerseyans are the most likely to stay locally--92 percent of those who last lived in a South Jersey town and moved within the state stayed in South Jersey. By comparison, 82 percent of North Jerseyans who relocated within the state remained in the same region, while 68 percent of the people who moved in-state to Central Jersey were from the same region.

Besides staying close to home geographically, those who relocated remain in the same type of community. Among those who last lived in one of New Jersey's six largest cities, 58 percent are still in an urban environment (15% major NJ city, and 43% other urban area). Seven-in-ten people who last resided in New Jersey suburbs continue to live in a suburban setting. Almost

- more -

half of those who last lived in other New Jersey urban communities moved to a major New Jersey city (15%) or another urban location (32%), while half moved to either an older (23%) or newer (24%) suburb in the state, and five percent moved to a rural area.

When asked about the main reason why they moved to their present location,

economic and family issues topped the list. Among the economic reasons, 1-in-5 say that they moved because their job was relocated or they wanted to live closer to their job, another 16 percent say it was because they bought a home, and six percent say the move was made in order to decrease their cost of living or taxes they pay.

Reasons related to family include 14 percent who say they moved because their family status changed (either through marriage, divorce, widowhood, or moving out of their parents' home), while 13 percent said they moved with their family as a child or moved to be closer to their family and/or the place where they grew up. Other reasons for moving are: people didn't like where they lived or just wanted a change in location (17%), and quality of life factors such as crime, the environment and the educational system (9%).

However, people moved to and from various types of communities for different reasons. Over one-third of those who moved to an urban area from a non-urban area name job related reasons (36%), while one-quarter of those who moved from one urban community to another say they just wanted to change where they lived (26%). Prior urban residents who moved to a suburb or rural town in New Jersey are more likely than others to mention a need to change their locale (27%) and to improve their quality of life (15%) as reasons for their last move. Current suburban residents who moved from a suburban or rural area are more likely than others to say that purchasing a home was the reason for their move (24%), and those moving into rural areas from suburbs or other areas are more likely to mention either family reasons (18% change in family status; 14% to be near family) or to reduce their cost of living (16%).

- more -

OUT-OF-STATE MOBILITY

About 3-in-4 New Jersey residents are content to remain in the state. If they were given the opportunity to move, more than half (56%) say that they would prefer to continue living in their same neighborhood and 7 percent said they'd like to move to another section of their town, while 13 percent said they'd like to move to another town in the state. However, about 1-in-4 (23%) said that given the opportunity they would like to move out of New Jersey altogether.

Those who prefer to move out of the state altogether are: younger residents 18 to 29 years old (33%), renters (30%), residents of New Jersey's major cities (37%), and those who feel New Jersey has become a worse place to live (37%).

When those who prefer to move to another town or state are asked about the type of area they would like to move to, a majority (52%) of those who might move prefer a suburban setting, 31 percent said they'd like to live in a rural community, 11 percent indicate an urban area, and 6 percent have no preference. A majority of current suburban (57%) and rural (51%) residents said they would like to live in a type of community similar to where they live now. However, there is a preference for moving to a suburban setting among residents of New Jersey's major cities (50%) and other urban areas (53%). In addition, four-in-ten rural residents would prefer a suburban environment (41%).

Although more than four-in-ten New Jerseyans would like to move to a new neighborhood or town, less than half of them believe it is a possibility in the coming year. While 19 percent of those who might move say they will definitely relocate in the next year and 23 percent say they will probably move, 26 percent say they probably will not move and 31 percent report that they definitely will not be moving.

- more -

When people who may move are asked the reasons why they plan to relocate, 1-in-4 say that they don't like where they are now or just want a change (26%), while another 1-in-4 report that they want to move for quality of life issues such as safety, environment, transportation, and educational services (26%). Eighteen percent mention cost of living and taxes, 10 percent plan to buy a home, 8 percent say their move would be job related, and 6 percent say a change in family status would be the reason for their move.

Those who prefer to relocate to an urban area are more likely than others to say the reason is job related (21%). Also, those who want to move to either an urban or rural area are more likely than those who want to move to a suburban area to say that quality of life issues are the reason for their preferred move (37% urban; 32% rural; 24% suburban). For possible urban relocaters these quality of life issues include better transportation and proximity to more services, while people who might move to rural areas focus on safety and environmental concerns.

A comparison of those who would like to move within the state to those who want to move out of New Jersey altogether also produces a contrast. While only 12 percent of those who want to move within the state say that costs and taxes are the reason for their move, almost twice as many (23%) who prefer to move out of state give this as the reason for their possible relocation.

BACKGROUND MEMO — RELEASE SL/EP53-4 (EP103-4), SUNDAY, AUGUST 13, 1995

The latest *Star-Ledger*/Eagleton Poll was conducted between May 25 and June 1, 1995, when a random sample of 802 New Jerseyans, 18 years and older, was interviewed by telephone. Figures based on this sample size are subject to a sampling error of about ± 3.5 percent at a 95 percent confidence interval. Sampling error is the probable difference in results between interviewing everyone in the population versus a scientific sample taken from that population. Sampling error does not take into account other possible sources of error inherent in any study of public opinion. The questions and figures referred to in this release are presented below. The location of each question on the actual questionnaire is in brackets.

** "Other" includes known suburban and rural towns and other towns outside of New Jersey which are not major U.S. cities.

EAGLETON POLL REGIONAL CLASSIFICATIONS

Region of State: Region is classified according to county boundaries:

North -- Bergen, Essex, Hudson, Morris, Passaic, Sussex, Union, and Warren

Central -- Hunterdon, Mercer, Middlesex, Monmouth, and Somerset

South -- Atlantic, Burlington, Camden, Cape May, Cumberland, Gloucester, Ocean, and Salem

Type of Town/Community: All municipalities in the state have been classified into one of five groups or "types," based on location, settlement patterns, population density and growth.

Major NJ Cities -- New Jersey's largest cities: Newark, Jersey City, Paterson, Elizabeth, Trenton, and Camden.

Other Urban Centers & Surrounding Areas -- This category is generally based on the cities of the state over 25,000, but also includes densely populated suburbs of urban areas which also have similar socio-economic characteristics. For example, all of Hudson county (outside of Jersey City), and much of Union, eastern Essex and southern Bergen counties are included in this category.

Older Suburbs & Towns -- This category includes two types of municipalities: urban suburbs which are not as densely populated and/or have significantly higher socio-economic characteristics than the nearby urban center; and densely populated towns which are not near urban centers, and have not experienced major development in the past decade.

Newer Suburbs -- These are primarily suburban areas which are "outside central city" proportions of the Census Bureau's Standard Metropolitan Statistical Areas and have continued to experience growth in the past 20 years. These municipalities are usually within a short distance of urban centers.

Rural -- This includes municipalities not in any of the categories above. These are small communities with scattered populations and somewhat denser small towns which are surrounded by rural areas.

Municipal SES: This typology is based upon the 10 District Factor Groups determined by the New Jersey Department of Education. This classification gives weight to each school district's per capita income, educational and occupational background of residents, poverty and unemployment levels, degree of urbanization, and population density and mobility. Each district was placed into one of ten categories of roughly equal size. Eagleton's typology applies these groupings to the relevant municipalities, and collapses the categories as follows:

Poor Towns -- Groups A and B

Lower-Middle Class Towns -- Groups C, D, and E

Upper-Middle Class Towns -- Groups F and G

Wealthy Towns -- Groups H, I, and J
