RELEASE: (EP130-2)

A story based on the survey findings presented in this release and background memo will appear in the Sunday, February 4 Star-Ledger. We ask users to properly attribute this copyrighted information to "The Star-Ledger/Eagleton-Rutgers Poll."

## **Governor Whitman Waves Farewell To New Jersey: State Shrugs**

### *Garden State Residents Look Back on 7 Years of Christie Whitman*

New Jerseyans appear to be losing little sleep over the departure of their Governor of the last seven years – Christine Todd Whitman. While enjoying generally popular regard, and being seen as a "fair-to-good" Governor, just three-in-ten credit her with any major accomplishment over her tenure as chief executive of the state. Whitman leaves a mixed legacy on handling a variety of issues in New Jersey, and she gets more of the blame for problems facing the state than she gets credit for those things that are going well.

While New Jerseyans describe Whitman as intelligent and hard working, they feel she lacked the common touch. Most show little emotional attachment to Whitman as a person; just one-in-four say they will miss having her as Governor. Moreover, assessments of Whitman's leadership ability and work ethic have declined somewhat over the last two years.

These are some of the main findings of the most recent Star-Ledger/Eagleton-Rutgers Poll, conducted by telephone with a scientific sample of 803 New Jersey residents between January 24 and 30. The sampling error for the survey is  $\pm 3.5$  percentage points.

When asked to think back over the last seven years, two thirds of New Jerseyans choose middle categories of either "good" (38 percent) or "only fair" (29 percent) to describe the job Whitman has done as Governor. Far fewer feel that she has done either an "excellent" (13 percent) or "poor" (17 percent) job of running the state.

Whitman left the governorship being generally well regarded as a person – 51 percent say they have a favorable impression of her, compared to 29 percent who have an unfavorable one, although a fairly high 20 percent voiced no opinion of her despite her seven years in the Governor's mansion.

Cliff Zukin, Director of the Poll, commented, "positive views of Whitman seem to be based more on her competency as a manager than on affection for her as a person. While New Jerseyans liked her, there was always some reserve and distance in the public's feelings for her."

The Rutgers-based survey asked how well each of nine personality characteristics fit Whitman. At the top of the list are “intelligent” (70 percent, down 12 percentage points from 1997), “a hard worker” (61 percent, down 13 points) and “a strong leader” (49 percent, down 17 points from 1997).

At the other extreme are more empathetic qualities: just 27 percent say Whitman well understands the common person,

and 28 percent say she understands “the concerns you personally face in day-to-day life.” Just about one-third feel the words “warm and caring” describe Whitman “a lot.”

In policy terms, Whitman seems to have left a small footprint in the state, at least as far as the public is concerned. Just 31 percent credit her with some major accomplishment during her seven years in the Statehouse. A plurality of 43 percent say she has “minor accomplishments” to point to, and fully one-in-five say she has no accomplishments at all.

The survey finds that Whitman gets credit for a number of positive developments that have occurred in the state over the past few years. About six-in-ten give her at least “some” of the credit for a cleaner environment (64 percent), a healthy state economy (60 percent) and preservation of open spaces (59 percent), although it is only about one-in-four who give her “most” of the credit for these accomplishments. Slightly fewer, but still a majority, give Whitman at least “some” of the credit for a reduction in the number of people on welfare (57 percent), a low unemployment rate (54 percent) and a reduction in the amount of crime (50 percent). Again, far fewer – about one-in-five – give her “most” of the credit for these achievements.

On the negative side, Whitman gets at least “some” of the blame for a number of problems now plaguing the state: 73 percent put this much responsibility on the Governor’s shoulders for a doubling of the state’s debt. Additionally, 69 percent feel Whitman is at least somewhat to blame for high property taxes, 66 percent feel that way about continuing high auto insurance rates, and 64 percent for the problems of school finance in less affluent areas around the state. Fewer, 53 percent, give Whitman some of the blame for the continued practice of racial profiling by New Jersey state troopers. About 40 percent feel that Whitman deserves “most” of the blame for the problems of state debt, car insurance costs, and high property taxes. The only area where Whitman gets a pass from Garden State residents is in the area of “increased traffic congestion,” where only 38 percent feel she is due at least some of the blame.

Finally, the Poll finds that New Jersey residents bear the Governor no animosity for leaving before her term had run its full course: 60 percent say they approve of her leaving to run the Environmental Protection Agency in the new Bush administration. However, only 28 percent say they will miss having her as Governor.

**BACKGROUND MEMO – RELEASE (EP130-2), SUNDAY FEBRUARY 4, 2001**

The latest *Star-Ledger*/Eagleton-Rutgers Poll was conducted between January 24-30 with a scientifically selected random sample of 803 New Jersey adult residents interviewed by telephone. The figures in this release are based on this sample size. All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. The sampling error for registered voters is  $\pm 3.5$  percent, at a 95 percent confidence interval. Thus if 50 percent of New Jersey adult residents were found to have a favorable opinion of Governor Christie Whitman, one would be 95 percent sure that the true figure would be between 46.5 and 53.5 percent ( $50 \pm 3.5$ ) had all New Jersey adult residents been interviewed, rather than just a sample. Sampling error increases as the sample size decreases, so statements based on various population subgroups, such as separate figures reported for Republicans, Independents or Democrats, are subject to more error than are statements based on the total sample. The following chart shows the relationship between sample size and sampling error.

Sampling error does not take into account other sources of variation inherent in public opinion studies, such as non-response, question wording or context effects. The verbatim wording of all questions asked is reproduced in this background memo. The sample has been stratified based on county and the data have been weighted on age and education to insure an accurate proportional representation of the state. The questions referred to in this release are as follows:

“Thinking back over the last seven years, how would you rate the job Christie Whitman has done as Governor -- excellent, good, only fair or poor?” (W1)

**BACKGROUND MEMO – RELEASE (EP130-2), SUNDAY FEBRUARY 4, 2001**

The latest *Star-Ledger/Eagleton-Rutgers* Poll was conducted between January 24-30 with a scientifically selected random sample of 803 New Jersey adult residents interviewed by telephone. The figures in this release are based on this sample size. All surveys are subject to sampling error, which is the expected probable difference between interviewing everyone in a population versus a scientific sampling drawn from that population. The sampling error for registered voters is  $\pm 3.5$  percent, at a 95 percent confidence interval. Thus if 50 percent of New Jersey adult residents were found to have a favorable opinion of Governor Christie Whitman, one would be 95 percent sure that the true figure would be between 46.5 and 53.5 percent ( $50 \pm 3.5$ ) had all New Jersey adult residents been interviewed, rather than just a sample. Sampling error increases as the sample size decreases, so statements based on various population subgroups, such as separate figures reported for Republicans, Independents or Democrats, are subject to more error than are statements based on the total sample. The following chart shows the relationship between sample size and sampling error.

Sampling error does not take into account other sources of variation inherent in public opinion studies, such as non-response, question wording or context effects. The verbatim wording of all questions asked is reproduced in this background memo. The sample has been stratified based on county and the data have been weighted on age and education to insure an accurate proportional representation of the state. The questions referred to in this release are as follows:

“Thinking back over the last seven years, how would you rate the job Christie Whitman has done as Governor -- excellent, good, only fair or poor?” (W1)
